and lambs**

FEEDING AND DRENCHING SOLUTIONS FOR CALVES AND LAMBS that reduce feeding time and stress for your animals

Based in the heart of New Zealand, Antahi develops innovative and efficient products. The best start = optimum health and productivity for life. Through our hands-on experience we know how to achieve this best start for your animals and we are here to help farmers and vets achieve top results in a kinder, easier, safer and easier manner, through better equipment. Why Antahi? An = animal and Tahī = first in Maori. If you look after your animals, they will look after you. Our products are designed to work with the animal, achieving the lowest stress and the greatest result, which in turn makes a farmers work and life easier.

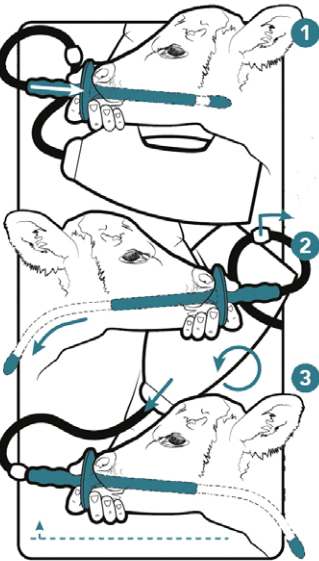

TRUSTI TUBER

Designed by a vet, the Trusti Tuber significantly reduces calf stress and discomfort. Flexi Tuber can be held in place with one hand. Large 4 liters capacity bottle. Transparent flexible tube makes it easy to clean and monitor flow. Ergonomic bottle handle. Perfect for large and small hands. Reliable valve. Fast flow even with thick colostrum. Shown in trials to almost halve procedure feeding time. Stopper and calf size markers provide easy guide for tube placement and positioning. Attachment included with Flexi Tuber for use without hands. Locking ring and calf weight indication for better positioning of the flexible tube (20 to 140 kg). Delivered with a teat for an easy transition between bottle and drenching.

TRUSTI TUBER

- 1 Place the mouthpiece so the circular guard connects comfortably with the calf's muzzle. With one hand, hold both the mouthpiece handle and under the calf's chin for easy control and guidance.
- 2 Advance the flexible tube through the mouthpiece so the tube is safely positioned within the oesophagus.
- 3 Raise the bottle to allow the liquid to flow. Ensure the head of the calf does not drop below stomach level. Ensure the tube does not come out of the oesophagus during fluid flow.

FLEXI TUBER

FLEXI TUBER is used in the same way as **TRUSTI TUBER** with the difference that it can be held by the calf thanks to the soft strap attachment on the muzzle. It allows you to reduce the behavioral stress of the calf by 88% compared to a more rigid feeding system.

THE IMPORTANCE OF COLOSTRUM

At birth, a calf's immune system is not yet fully developed and it does not have enough antibodies to ensure it thrives. It needs colostrum to ensure it can develop healthily and happily in the herd. Colostrum protects the calf against different external illnesses (diarrhoea, pneumonia, etc.). Feeding with this "first" milk produced by the cow ensures good growth and a strong immune system into adulthood.

FEEDER WITH TEAT

A specially designed bottle for both bottle feeding with the Antahi Suckle Up cap, and tube feeding with the Antahi Tubers. What makes a bottle a better bottle? Well that depends on the user, in this case the farmers and calf rearers, so we asked them: What would you like in a bottle and what makes your job easier? The Antahi Feeder is the result. High quality valve for reliable flow and no leaks. 4 liters or 1 gallon size for less refilling. Wide cap for eas filling and easy cleaning. Clip-on mouthpiece for maintaining hygiene. Ergonomic design for both small and large hands. Broad base for uneven ground.
